“ Having owned and operated assisted-living and Alzheimer’s facilities for over 20 years, and as a current member of the board of directors for the Assisted Living Federation of America (ALFA), I can assure you that this product will have a significant impact on the assisted living industry. I expect The Transfer Vest from SDS to truly become the product of choice for transferring patients in a broad range of health care settings including home health care use. We are currently using the product with our residents; their families have embraced it because it increases the safety, dignity and security of their loved ones, while also reducing the risk of injury to our caregivers. ”

Skip Comsia, President
SRC Retirement, Board Member
Assisted Living Federation of America (ALFA)

THE SDS VEST

Get a better grip on patient transfers.

ChooseTheVest.com

Good for your patients, good for your caregivers.

Get a better grip on patient falls.

Now there's a way to reduce patient falls and injuries during transfers, and make transfers less physically demanding on your staff. With The Transfer Vest by SDS Medical, caregivers can offer more controlled assistance and stability to the patient, while the patient feels a comforting embrace and secure, gentle lifting during transfer.

The vest pleasantly conforms to the patient's torso, cushioning it while providing a sturdy foundation for strategically placed, ergonomic handles. The Clavicle Handles are supported by internal webbing which disperses energy vertically to the Glute Strap™, initiating the lift from the buttocks, easing stress on the body.

Get a better grip on employee injuries.

With patients, typical manual transfers can produce skin tears, bruising, even broken ribs, especially among patients suffering from osteoporosis. But transfers are also tough on caregivers. The vast majority of caregiver incidents are directly attributed to repetitive motion injuries from transfers.

Get a better grip on quality of care.

The Transfer Vest is the best solution on the market today to address these potential liabilities and their associated costs. It's easy to put on patients, and easy for them to like. The vest feels so reassuring, many patients don't want them removed after transfer. The Transfer Vest helps patients get the care they need and avoid the injuries that can set back their progress.

Patient safety, costs for transfer falls and workers' compensation claims can be difficult to control. Get a better grip on all of them with The Transfer Vest from SDS Medical.

Reinforced internal webbing provides durability and disperses energy vertically

Back Shoulder Handles stabilize upper torso after ambulation

Clavicle Handles allow caregivers better ergonomic position to reduce risk of injury

Polyurethane-coated Gait Belt

Cover material:

- Latex free
